Subject: Comment on Assessment Report C/NL/06/01

In my opinion it is stupid to bring a new flower on the European Market which is genetically altered. How far can we go? Only to help a Third World country? There are other ways for that.

So many scientists are against genetic engineering. They warn us how dangerous it can be.

It starts with a flower or fruitfly but where is the end?

Did we forgot that 37 people died and about 1500 healthy men and women got a muscle disease from a sleeping pill, which contained a genetic engineerd substance? The so called Tryptophan Scandal?

Please stop this ridiculous trade and import normal flowers.

Genetic engineering is dangerous.

Nature is beautiful enough.
